(a) RCR DL, CL

CF = 1

Ans.

(b) SAL DL, CL

EOH

## Flag Register

→ flag register contains the status of the current result.

→ Control flags

→ Conditional flags → Trap flag (TF)  
→ Interrupt flag (IF)  
→ Directional flag (DF)

→ Control flags

- ① Sign flag (SF)    ② Overflow flag (OF)
- ③ Carry flag (CF)    ④ Zero flag (ZF)
- ⑤ Parity flag (PF)    ⑥ Auxiliary flag (AF)

⑥ nibble = 4 bit  
byte = 8 bit

SF gives you the  
MSB = 1    SF = 1 not negative  
MSB = 0    SF = 0

unsigned number    OF = indicates there is an overflow in a signed number (gone out of range)

0000 0000  
FFFF

Suppose, your roll number is

your cricket score is always

zero: the current result of the

unsigned number

| — — — — — |  
8 bit magnitude

0 — 255 dec

00h — FFh hex

$2^8 = 256$  combinations

there is no bit for sign.

So, if MSB = SF does not apply  
for unsigned number.

~~signed number~~

0  
0000  
1111  
F

0  
0000  
1111  
F

## signed numbers

→ can be either positive/negative.

→ we cannot put '-' in front of numbers like we do in our paper. MP won't understand.

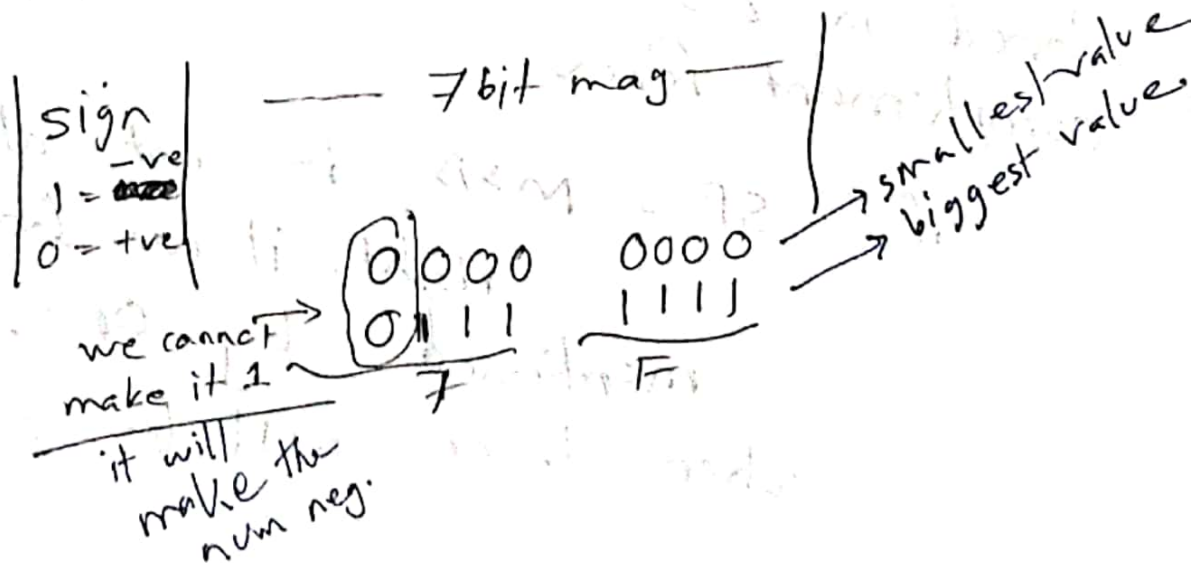

→ we use MSB as sign bit.

→  $2^8 = 256$  combinations will be

half (+ve)  
half (-ve)

$2^7 = 128$   
combinations

negative side

$-80 - 7F - 7E - 01$

if, i got a result

$\frac{1000}{8} \quad \frac{0011}{3}$

can have two meanings

3 h unsigned system since they are all magnitudes.

for signed numbers the number is always stored in 2's complement form.

$\frac{1000}{0111} \quad \frac{0011}{1101}$   
 $\frac{-7}{D}$

if we convert it to

if SF = MSB is not always right, it can be mentioned by OF; (i.e. when there will be overflow)

The continuation of SF comes into overflow flag, when you get out of range for signed numbers.

i.e.

$-80$  ———  $-01\ 00$  ———  $7Fh$   
 less than ——— more than  
 $-80$   $7F$

if you want to be sure check your ~~over~~ overflow flag first; at that time only you will know whether your SF is right/wrong.

if,  $OF = 0$ ,  $SF = 1/0$  is actual sign & it is correct

if,  $OF = 1$ ,  $SF = 1/0$  is wrong, or showing the wrong sign.

11	10	01	00
0	0	1	1

$$\begin{array}{r} 42h \\ + 23h \\ \hline \end{array}$$

- 5

SF = 1,  
OF = 0, since it is within  
range  
AF = 0  
PF = 0  
ZF = 0  
CF = 0

CF = 1 ; when there is a carry out of MSB.

$$\begin{array}{r} 1111 \\ + 0001 \\ \hline 10000 \end{array}$$

CF = 1

PF = depending how many 1's are there inside the result.  
For odd number of 1's, PF = 0  
For even " " " , PF = 1.

AF = Auxiliary carry Flag  
when there is a carry from the lower half nibble to upper half nibble.

ZF = tells you whether your result is zero or not. Result = 0000 ZF = 1  
= 0010 ZF = 0.
